East Carolina University
Athletic Training Education Program

Infectious Disease Policy
2005

The medical director will determine if athletic training personnel are fit and able to be in a health care situation with the following suspected infectious conditions, but limited to:

- Mumps
- Measles
- TB
- Influenza
- Strep throat
- MRSA
- Conjunctivitis
- Folliculitis
- Tinea corporis (ringworm)
- Varicella
- Hepatitis (A, B, C, etc.)
- Staphylococcus
- Abscesses, boils, cellulitis
- Streptococcus
- Meningitis

If an athletic training student is infectious, the medical director will relay to the program director/clinical coordinator the ability of the student to be involved in health care. Until the student hears directly from the program director/clinical coordinator, he/she is to refrain from being in any health care facility.

It is the student’s obligation to inform any preceptor or field experience supervisor of his/her absence from an assignment.

If students have concerns about their health, they are to contact a Preceptor to set you up an appointment with the Medical Director at the Student Health Services on campus as soon as possible.

Students are not to be in any health care situation until the medical director clears them to do so, and the program director has informed them of this.

I have read, understand and will abide by this Infectious Disease Policy:
